

Web App Performance Analysis Report

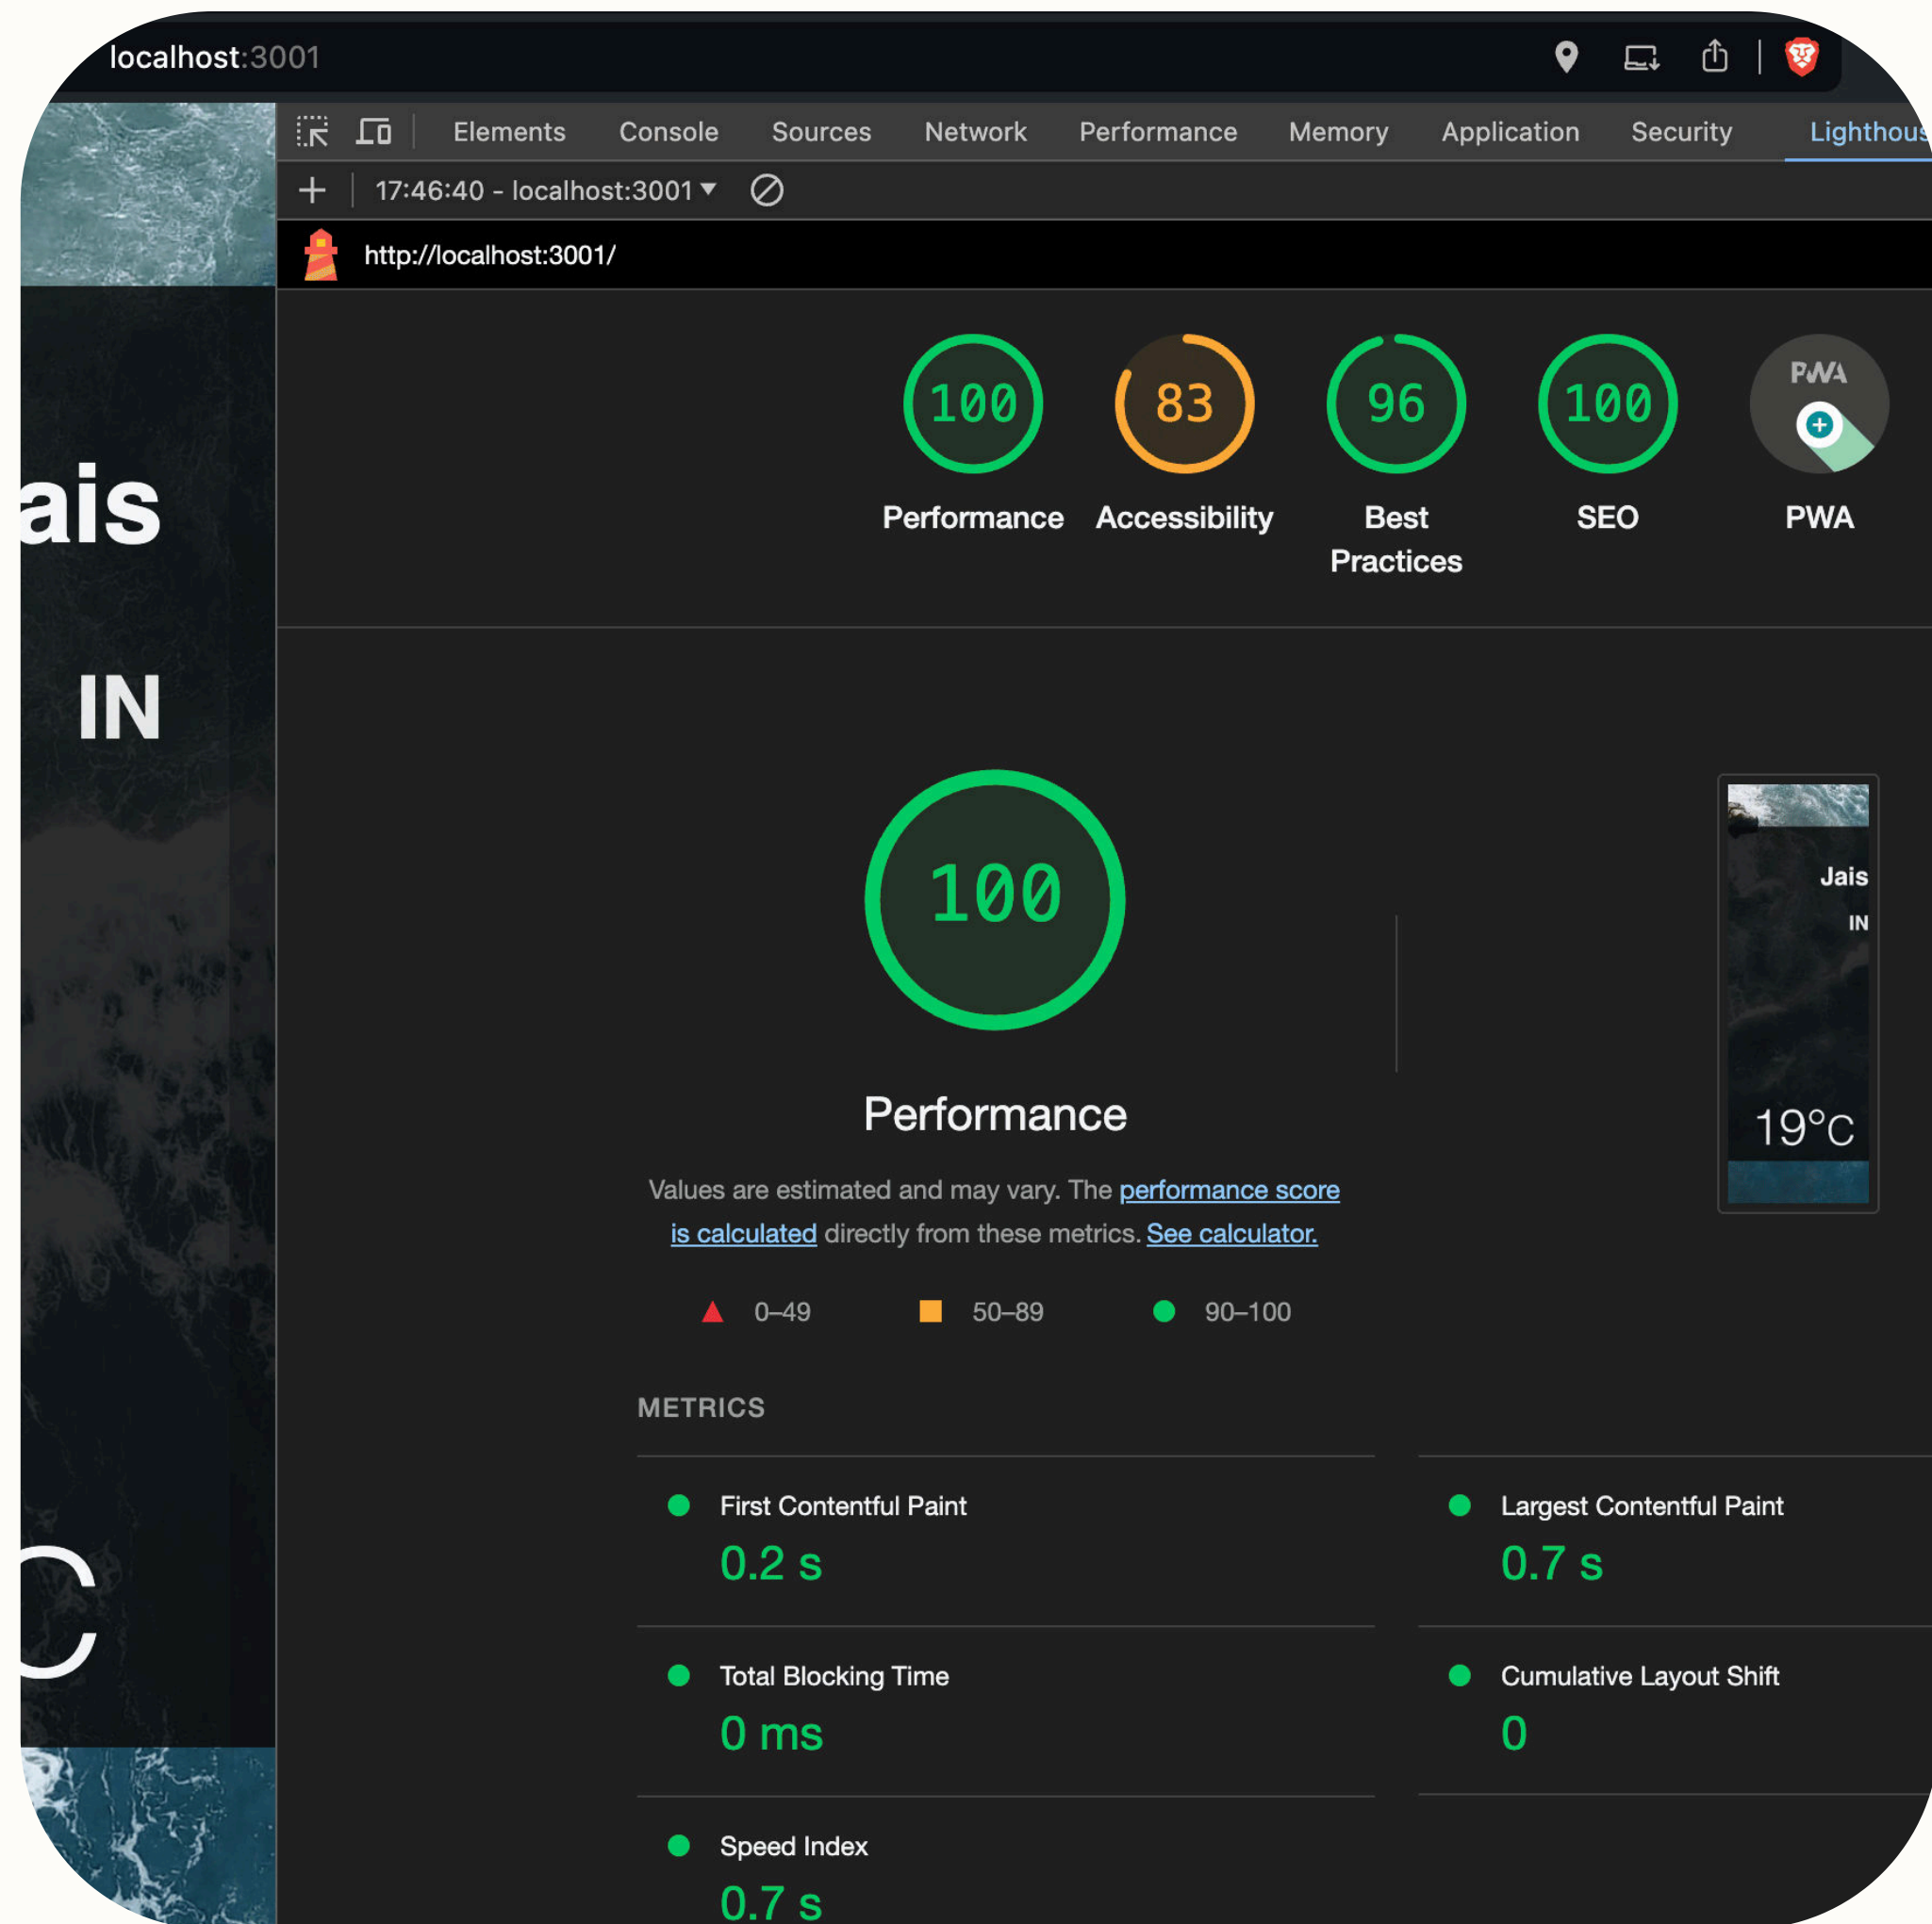

Introduction

Understanding the **importance** of web app performance and its impact on user experience. Exploring strategies for *optimizing* performance through efficient coding and resource management.

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

TABLES AND LISTS

▲

Lists do not contain only `` elements and script supporting elements (`<script>` and `<template>`).

▼

▲

List items (``) are not contained within ``, `` or `<menu>` parent elements.

▼

These are opportunities to improve the experience of reading tabular or list data using assistive technology, like a screen reader.

AUDIO AND VIDEO

○

`<video>` elements contain a `<track>` element with `[kind="captions"]`

▼

These are opportunities to provide alternative content for audio and video. This may improve the experience for users with hearing or vision impairments.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).

DIAGNOSTICS

▲

Minify JavaScript

— Potential savings of 239 KiB

▼

▲

Reduce unused JavaScript

— Potential savings of 300 KiB

▼

▲

Page prevented back/forward cache restoration

— 1 failure reason

▼

■

Image elements do not have explicit width and height

▼

■

Serve static assets with an efficient cache policy

— 3 resources found

▼

■

Remove duplicate modules in JavaScript bundles

— Potential savings of 38 KiB

▼

■

Avoid serving legacy JavaScript to modern browsers

— Potential savings of 0 KiB

▼

■

Avoid enormous network payloads

— Total size was 26,456 KiB

▼

○

User Timing marks and measures

— 22 user timings

▼

○

Initial server response time was short

— Root document took 0 ms

▼

○

Avoids an excessive DOM size

— 50 elements

▼

○

JavaScript execution time

— 0.1 s

▼

○

Minimizes main-thread work

— 0.3 s

▼

○

Minimize third-party usage

— Third-party code blocked the main thread for 0 ms

Network Performance

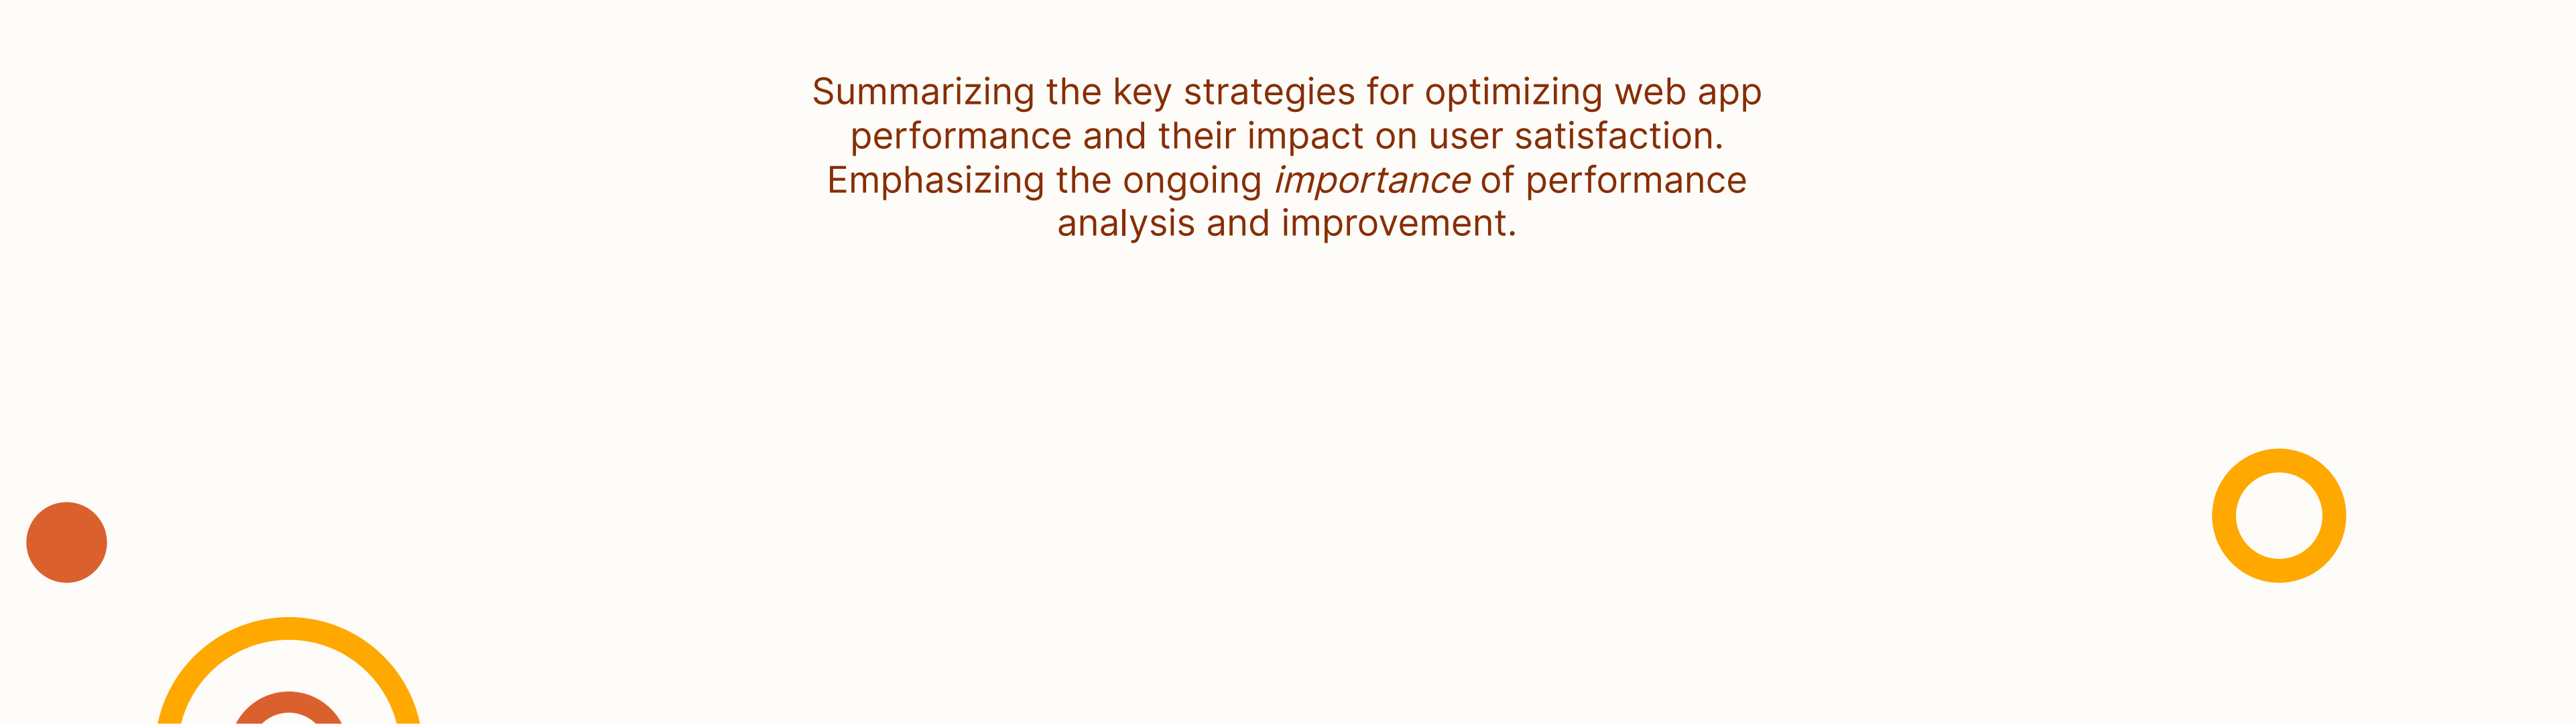

Understanding the impact of **network** latency and bandwidth on web app performance. Techniques for reducing latency and optimizing data transfer for improved user experience.

Conclusion

Summarizing the key strategies for optimizing web app performance and their impact on user satisfaction. Emphasizing the ongoing *importance* of performance analysis and improvement.

Thanks!
